RY "Expression pattern and functional characteristics of two novel splice

RY "Expression pattern and functional potassium channel TREK-2.";

RI J. Physiol. (Lond.) 539:657-668(2002).

C. - I- PUNCTION: Outward rectifitying potassium channel. Produces rapidly activating and non-inactivating outward rectifier K(+) currents.

CC Activating and non-inactivating outward rectifier K(+) currents.

CC Activating and non-inactivating outward rectifier K(+) currents.

CC Activated free fatty acids.

CC -- SUBCELLULAR LOCATION: Integral membrane protein (Potential).

Not affected by volatile general anaesthetics such as chloroform, diethyl ether, halothane and isoflurane.
SIMILARITY: Belongs to the two pore domain potassium channel (TC 1.A.1.8) family.
                                                                                                                                                                                                                                                                                                                                                                                                                              "A neuronal two P domain K+ channel stimulated by arachidonic acid and polyunsaturated fatty acids.";

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FRIENT NO. US20020028485A1
GENERAL INFORMATION:
FRAPLICANT: Helen Jane Meadows
APPLICANT: Helen Jane Meadows
TITLE OF INVENTION: NOVEL COMPOUNDS
FILE REFERENCE: GP-30031-D1
CURRENT APPLICATION NUMBER: US/09/828,746
CURRENT APPLICATION NUMBER: US 09/236,080
FRIOR APPLICATION NUMBER: US 09/236,080
FRIOR FILING DATE: 1999-01-25
RIOR FILING DATE: 1998-01-27
FRIOR FILING DATE: 1998-00-9
NUMBER OF SEQ ID NOS: 6
SEQ ID NO 6
LENGTHA: 411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALIGNMENTS

Novel nucleic acid encoding a TREK-1 potassium channel protein for transfecting cells to be used to identify compounds with anesthetic Human; potassium channel protein; TREK-1; anaesthetic; analgesia; Ę, Patel ΰ Romey Human TREK-1 potassium channel protein. AAE10341 standard; protein; 411 AA Lesage F, Claim 3; Page 28; 39pp; English. (CNRS) CNRS CENT NAT RECH SCI 12-FEB-1999; 99US-0119727P. 11-FEB-2000; 2000WO-IB000226 (first entry) Honore WPI; 2000-549146/50. N-PSDB; AAD17496 WO200047738-A2 Homo sapiens Lazdunski M, 10-DEC-2001 17-AUG-2000. properties.

The invention relates to human and mouse TREK-1 potassium channel proteins and their corresponding DNA molecules. TREK-1 nucleic acid is useful for transfecting cells to induce expression of the TREK-1 potassium channel protein. These cells are then used in assays to identify compounds which have anaesthetic properties, producing a safe, reversible state of unconsciousness with concurrent amnesia and analgesia in a mammal upon inhalation. The present sequence is human TREK-1

Sequence 411 AA

```
cc may be alpha subunits, which form the functional channel, or accessory subunits that act to modulate the channel activity. K+Hnov59 is a 4 transmembrane domain, 2 pore domain potassium channel. The gene is clocated on chromosome 19, determined via PCR chromosomal localisation clocated on chromosome 19, determined via PCR chromosomal localisation catesian of expressed sequence tags (ESTS) which were related but not identical to known human potassium channels. Potential polymorphisms detected as sequence variants between multiple independent clones. Conchemical pathways. Defective potassium channels are known to cause four human diseases: episodic ataxia with myokymis, cardiac arrhythmia clong QT syndrome); epilepsy; and Bartter's syndrome. As potassium channels are critical components of virtually all cells, it is likely that abnormal potassium channels are also implicated in certain renal, cardiovascular and central nervous system (CNS) disorders. Nucleotides encoding K+Hnov proteins may be used for identifying homologous or crelated proteins and the DNA sequences encoding them. They may be used to produce compositions that modulate the expression and function of the K+Hnov protein and in studying the biochemical pathways associated with it. They may also be used for the recombinant production of K+Hnov protein in fermentation cultures. Additionally, such nucleotides may be used in gene therapy protocols for the treatment of diseases associated with abnormal potassium channels.
                                                                                                                                                                                                                                                                                                                                                                                    Sequence 411 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chromosome 1q32.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY28496;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                           This sequence is the h-TREX1 polypeptide, encoded by the h-TREX1 polynucleotide AAZ00039. h-TREX1 is a two pore potassium channel, and the gene maps to human chromosome 1q32, between the markers D18237 and W15105. The polynucleotide sequence of h-TREX1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREX-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenrative diseases including Alzheimer's, stroke, and head trauma and neurological disorders including migraine

The present sequence is human TREXI (h-TREXI). h-TREXI is a member of the 2P domain potassium channel family of proteins which play a part in the control of fresting membrane potential. Modulation of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as epilepsy, sleep-related disorders, cognitive dysfunction, attention deficit disorder, addiction, anxiety/phobia, Parkinson's and Huntington's chorea, cerebral palsy, incontinence, erectile dysfunction or alopecia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SNQISHWDLGSSFFFRGTVITTIGFGNISPRTEGGKIFCIIYALLGIPLFGFLLAGVGDQ 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polymucleotide and polympetide of the invention demonstrate neuroprotective, nootropic, tranquiliser, antimidratine, neuroleptic, antimanic, antidepressant, anticonvulsant, antimidratine, neuroleptic, antimanic, antidepressant, anticonvulsant, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antidepressant concertic, anti-HIV, antisathmatic, osteopathic, uropathic, antiulcer and antiallergic properties. The nucleic acid molecule and polypeptide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant G-protein coupled signalling, a disorder related to aberrant G-protein coupled signalling, a disorder related to aberrant call disorders, severe mental retardation and dyskinesias, prain disorders, spinal cord disorders, immunological disorders, endocrimal diseases, growth disorders, immune-related disorders, endocrimal diseases, growth disorders, immune-related disorders, endocrimal diseases, growth chisorders, and pituitary disorders. Furthermore, the polynucleotide may be used in chromosome identification, in identifying organisms from minute current sequence is that of a human GPCR (G-protein coupled receptor) protein of the invention which was used for homology purposes.
                   tranquiliser; antimigraine; neuroleptic; antimanic; antidepressant; anticonvulsant; antiparkinsonian; cytostatic; cardiant; hypotensive; anticonvulsant; antiparkinsonian; cytostatic; cardiant; hypotensive; antianginal; analgesic; ancrectic; antiantimatic; osteopathic; evere mental retardation; dyskinesia; brain; spinal cord; affective; neoplastic; cardiovascular; immunological; immune; endocrinal; growth; eating; HIV infection; cancer; metabolic; pituitary; chromosome identification; gene therapy; human; receptor; potassium channel subfamily K member 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecule encoding a human G-protein coupled receptor, useful for diagnosing, preventing or treating diseases involving the receptor, e.g. Parkinson's disease, dementia, asthma, hypertension or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
-1. In rate, TREK-1 is highly expressed in much of the brain and is inhibited by protein kinase C and protein kinase C mediated phosphorylation. It is activated by volatile general anaesthetics and is expressed at high levels in the brain of sleep animals. Based on these criteria and on experimental results, it is hypothesized that TREK-1 is a key mediator of sleep (when open) and waking (when closed). The invention provides methods for identifying a sleep-or wakefulness-promoting compound based on the compound's ability to modulate two pore domain K+channels such as TREK-1. It also provides screening methods for isolating short sleep, no rebound and sleep deprivation resistant Drosophila mutants useful for identifying sleep-related molecular targets.
